

Chesapeake Bay FieldScope

Chesapeake Bay FieldScope is part of National Geographic's FieldScope project—a web-based mapping, analysis, and collaboration tool. With mapping, graphing, and data uploading capabilities, Chesapeake Bay FieldScope allows students to visualize water quality, land use, and other data. This powerful tool also allows students to upload data from their own water samples and so become citizen scientists in the Chesapeake Bay watershed and estuary ecosystems.

For an introduction to how to use FieldScope see:
